It’s Time to BREAK the Most Common Myths About NDR

Myth: NDR can’t detect encrypted or advanced threats.

REALITY…
With packet-level visibility, NDR empowers security teams to detect and rapidly respond to known threats and anomalous behaviors using the network.

Myth: I don’t need NDR because I have EDR.

REALITY…
EDR is great for endpoint detection, but it’s not comprehensive enough on its own to cover all threats. NDR detects activities carried out by malicious actors even if they don’t go through endpoints.

Myth: NDR isn’t a cloud security tool.

REALITY…
NDR covers a broad variety of use cases involving other endpoint and workload types, including cloud workloads, on-premises assets, Internet of Things (IoT) devices, and mobile devices. NDR operates out of band and without agents.

Myth: NDR isn’t a cloud security tool.

REALITY…
NDR covers a broad variety of use cases involving other endpoint and workload types, including cloud workloads, on-premises assets, Internet of Things (IoT) devices, and mobile devices. NDR operates out of band and without agents.
